

SANZIDA MOIN TITHI

B.Sc. in CSE (Final Year) — Software Engineer / Competitive Programmer

📍 Satkhira, Bangladesh — 📞 +8801740745352 — ✉️ moinsanzida4@gmail.com

🌐 [Sanzida Moin](#) — 🌐 [Sanzida5](#)

PROFILE

Final-year CSE student at KUET with hands-on experience in building desktop and web applications. Proficient in C++ with strong problem-solving skills demonstrated through 390+ problems solved on Codeforces. Experienced in PHP, Linux/Ubuntu, and mobile development. Seeking software engineering roles to build scalable and reliable backend systems.

PROBLEM SOLVING

Codeforces – Handle: [tithi_61](#) — Max Rating: 1038 [codeforces](#)

LeetCode – Username: [tithi_61](#) — Rating: 1540 [leetcode](#)

TECHNICAL SKILLS

- **Languages:** C++, Python, Java, JavaScript/HTML/CSS
- **Frameworks & Tools:** Firebase (Auth, Realtime DB, Cloud Storage), Java (Swing), PHP (Laravel)
- **Databases:** SQL Server, MySQL
- **Engineering:** responsive UI/UX, Git, Bootstrap

PROJECTS

LaravelProject-Foodie (Laravel 10) [GitHub](#)

- Developed a full-stack food ordering web application using Laravel framework, implementing MVC architecture for clean and maintainable code.
- Designed database schema and implemented MySQL for storing users, food items, and order details.
- Built interactive frontend views with Blade templating and integrated backend logic for features like menu browsing, cart management, and order processing.

Portfolio — PHP, JavaScript, CSS [GitHub](#)

- Built a dynamic personal portfolio web application to showcase skills, experience, and projects.

Colorful Fruit Detection and Counting System [GitHub](#)

- Developed a computer vision system to detect and count fruits based on color using HSV color space.
- Applied image processing techniques including morphological operations, contour detection, and hole filling to reduce noise and improve accuracy.
- Handled overlapping fruits using connected component analysis, distance transform, and watershed segmentation.
- Built an interactive Gradio-based web interface for real-time image upload, visualization, and result display.

Bank Management System – Desktop App [GitHub](#)

- Developed a desktop application to manage banking operations such as account creation, transactions, deposits, withdrawals, and customer details.
- Implemented data storage using MySQL, ensuring secure and efficient database management.

SWC 3D Interactive Visualization – OpenGL Project [GitHub](#)

- Implemented dynamic lighting systems including directional, point, and spot lights with Phong and Gouraud shading techniques.
- Built animated interactive features such as articulated pedestrians, ceiling fans, doors, TV animation, and water ripple effects.
- Applied procedural textures and implemented complex curve surfaces including Bezier Swept Surface, Catmull-Rom Spline, and Ruled Surface using GLSL, GLFW, GLAD, and GLM.

EDUCATION

Khulna University of Engineering & Technology (KUET)

B.Sc. in Computer Science & Engineering

Mar 2022 – Expected June 2026

Khulna, Bangladesh

- CGPA: 3.39/4.00 (up to 7th Semester). Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Systems
- Currently in 8th Semester
